FOR IMMEDIATE RELEASE

Motorized ShadeLoc® Zipper Shade Available in Multi-band Configuration

LONG ISLAND CITY, N.Y.—MechoSystems, the world’s foremost provider of commercial WindowManagement® solutions, has designed a ShadeLoc zipper-shade system that accommodates multi-banding.

Multi-banding is the practice of driving multiple shades (or “shade bands”) with a single motor or, in the case of manual shades, a single drive chain. Multi-banding reduces the overall motor count and associated wiring costs and facilitates shade alignment. With [manual shades](#), the practice translates to fewer drive chains.

ShadeLoc is a specialized shade assembly that uses side channels to capture the zippered edges of a shade cloth. The system holds the fabric securely in place, resisting the push or pull of air pressure and hiding light gaps for superior room-darkening, solar-shading, or both in the DoubleShade® configuration.

The system is available with 2½ in. (64mm) center-support channels that enable multi-banding. The [multi-banded ShadeLoc](#) is therefore able to provide superior daylight control cost-effectively, even along continuous glazing, such as in a board room.

Features:

- Shade bands that lock into channels.
- No light gaps.
- Single-shade and DoubleShade configurations.
- Superior room-darkening, solar-shading, or both.
- Slim, two-part channels for a convenient, clean installation.
- Optional seamless cover.
- Cost-effectiveness.
