FOR IMMEDIATE RELEASE

WhisperShade® IQ2® Simplifies Motorized-Shade Integration

LONG ISLAND CITY, N.Y., September 26, 2013—The most advanced motorized-shading solution on the market—the WhisperShade IQ2 Electronic Drive Unit—makes shade integration simpler and more economical at every scale.

Networking gone native

IQ2 adds flexible integration options to the original IQ design without adding cost. Every unit offers both dry-contact and network-based control. A built-in networking capability allows shades to network without relying on external group controls or relay systems, shaving cost and complexity from the integration process.

Wiring made simple

The IQ2 design also eliminates the added cost and installation time associated with conventional, home-run wiring by using a daisy-chained, Cat-5 system. This system supports instant, two-way communication and allows new devices to be added anywhere along the line.

Technology that plays nice

IQ2 is the ideal candidate for motorized-shade integration due to the flexible integration options, native networking capabilities, and simplified wiring. The Electronic Drive Unit:

- Integrates directly with Savant Systems® and Vantage™ via MechoNet.
- Offers Control4® ZigBee® two-way wireless communication via MechoRF®.
- Integrates with many devices via dry contact and RS-232, IP, RF, and IR interface devices.
- Is available with accessories for use with A/V, lighting, security, and BMS, including MechoSystems' SunDialer® and SolarTrac® systems.
